PROFILE

Front-End Developer specializing in React, Next.js, and Redux. Focused on building responsive applications and clean user interfaces with Tailwind CSS. Skilled in integrating REST APIs and optimizing performance for modern web apps. Passionate about creating clean, user-friendly interfaces.

PROJECTS

Chat with AI :

- Developed a web application that allows users to interact with ChatGPT in real time.
- Built an internal API using Next.js to handle requests to the OpenAI API.
- Implemented Server-Side Components (SSC) for improved performance and SEO.
- Implemented a strongly-typed architecture using TypeScript for improved reliability and maintainability

Reddit Client:

- Developed a Reddit client that fetches subreddit posts and comments via Reddit API.
- Implemented global state management with Redux for consistent and efficient data handling.
- Designed a mobile-first responsive interface with Tailwind CSS.

Spotify Playlist App:

- OAuth authentication for user playlists.
 - Integrated Spotify Web API to fetch, display, and manage playlists dynamically.
 - Improved user experience by handling API errors and loading states.
-
